

INEEL CERCLA Disposal Facility Capacity Used as of 1/31/05

Constituent	Sum (kg or Ci)	Disposed in Landfill	WAC Limit (kg or Ci)	Total anticipated inventory 12/04	Percent of ICDF Capacity
Arsenic	4.47E+02	6.26E+01	4.40E+04	5.10E+02	1.16%
Ce-144	1.20E-01		1.4	1.20E-01	8.55%
I-129	1.45E-01		2.4	1.45E-01	6.06%
Ru-106	3.29E-01		9.2	3.29E-01	3.57%
Sodium	2.48E+04	9.43E+02	2.40E+06	2.57E+04	1.07%
Thallium	6.59E+01	1.59E+00	3.30E+03	6.75E+01	2.05%
Vanadium	1.66E+03	2.24E+03	3.40E+05	3.00E+03	1.15%

At 1/31/05, it is estimated that 54,000 cubic yards of waste will have been disposed in the ICDF. Total ICDF volume available when Cell 2 is completed will be 500,000 cubic yards. The table shows only those hazardous constituents that have exceeded 1% of ICDF's capacity (limit) for each hazardous constituent (last column shows % used).
